

Leased Line - Point to Point

Leased Lines provide secure, dedicated and cost effective data connections between customer sites. A leased line can carry multiple types of traffic including voice, data, video or web content, and offers dedicated, high bandwidth, guaranteed connectivity. It also offers symmetrical data transfer meaning you can send and receive information at the same speed and at the same time.

Security

A Leased Line is a dedicated point-to-point connection solely for your use; it is not shared with any other traffic. It represents one of the most secure ways of connecting two sites together. Certain types of Leased Line which connect to the Internet can be enhanced by the use of encryption equipment or firewalls. If you have a particular security concern, our consultants will work with you to upgrade your security so that it meets your needs.

Reliability

The Leased Line service is built on KCOM's own Synchronous Digital Hierarchy (SDH) network and offers the highest possible line quality.

The network is managed 24 hours a day, 365 days a year so you can be assured that your connection is in safe hands.

Leased Line Features

- ✓ Geographic Coverage: Complete UK coverage including Northern Ireland
- ✓ Dedicated, guaranteed speeds from 1Mbps to 1Gbps
- ✓ SLA: 5 hour circuit restoration, 99.85% Service availability
- ✓ Security and Privacy: the Leased Line is dedicated entirely to you
- ✓ Reliability: Leased Lines are delivered on fibre optic transmission networks
